

## Nissan Stadium

Nashville, Tennessee

### PROJECT DESCRIPTION

Installation of LED lighting and controls to Nissan Stadium

### PARTNERS

Enterprise Solutions & LG Electronics

### SIZE

50,000 sq ft

### OWNER

Metropolitan Government of Nashville and Davidson County

Autani partnered with leading LED lighting manufacturer LG Electronics to convert the existing lighting at Nissan Stadium, home of the NFL's Tennessee Titans, to LED solutions using LG's Sensor Connect High Bays. Chosen by Nissan Stadium for the project, Enterprise Solutions recommended LG's superior LED lighting products, which are compatible with Autani wireless controls, the stadium's preferred ZigBee®-based controls platform, for the deployment of active control networks.

"Autani's EnergyCenter is proven best-in-class IoT which far outpace anything we've seen in the industry. Together we're creating optimized smart controls and versatile systems to manage all energy consumption in buildings, transforming the experience for all their users." – LG Electronics
